Amendment "A" page 3 of 10 10/695,853

DOCKET NO. 03-0128 FETF: 81615/6653

In the Claims:

- 1 (currently amended): A method of grouping cells
 in an integrated circuit design comprising steps of:
- (a) receiving as input a representation of an integrated circuit design;
- (b) initializing a corresponding list of cells for a common signal domain in the integrated circuit design;
- (c) selecting a cell belonging to a common signal domain that is not included in a corresponding list of cells for a common signal domain;
- (d) tracing a net from an input port of the selected cell
 to a signal driver; [[and]]
- (e) inserting the selected cell in the corresponding list of cells for the common signal domain associated with the signal driver; [[and]]
- (f) [[(e)]] tracing the net to an input port of each cell
 connected to the signal driver; and
- (g) inserting each cell traced from the net in the corresponding list of cells for the common signal domain associated with the signal driver.
- 2 (currently amended): The method of Claim 1 further comprising a step [[(f)]] of repeating steps (c), (d), (e), (f), and (g) and (e) until every cell belonging to a common signal domain has been inserted in a corresponding list of cells for the common signal domain.
- 3 (currently amended): The method of Claim 2 further comprising a step [[(g)]] of generating as output a corresponding list of cells for a common signal domain in the integrated circuit design.
- 4 (original): The method of Claim 1 wherein step (d) includes storing a name of the selected cell in the corresponding list of cells for the common signal domain

DOCKET NO. 03-0128 FETF: 81615/6653

associated with the signal driver.

- 5 (currently amended): The method of Claim 1 comprising performing steps (b), (c), (d), (e), (f), and (g) and (e) for cells that are flip-flops in a scan chain.
- 6 (currently amended): The method of Claim 5 comprising performing steps (b), (c), (d), (e), (f), and (q) and (e) for a common signal domain that is a scan clock domain.
- 7 (currently amended): The method of Claim 6 comprising performing steps (d), (e), (f), and (q) and (e) for a net that is a clock net.
- 8 (currently amended): The method of Claim 7 comprising performing steps (d), (e), (f), and (g) and (e) for an input port that is a clock port.
- 9 (currently amended): The method of Claim 8 comprising performing steps (d), (e), (f), and (q) and (e) for a signal driver that is a clock driver.
- 10 (currently amended): A computer program product for grouping scan flops for scan testing comprising:
- a medium for embodying a computer program for input to a computer; and
- a computer program embodied in the medium for causing the computer to perform steps of:
- (a) receiving as input a representation of an integrated circuit design;
- (b) initializing a corresponding list of cells for a common signal domain in the integrated circuit design;
- (c) selecting a cell belonging to a common signal domain that is not included in a corresponding list of cells for a common signal domain;

DOCKET NO. 03-0128 FETF: 81615/6653

- (d) tracing a net from an input port of the selected cell
 to a signal driver; [[and]]
- (e) inserting the selected cell in the corresponding list of cells for the common signal domain associated with the signal driver; [[and]]
- (f) [[(e)]] tracing the net to an input port of each cell connected to the signal driver; and
- (q) inserting each cell traced from the net in the corresponding list of cells for the common signal domain associated with the signal driver.
- product of Claim 10 further <u>causing the computer to perform</u> comprising a step [[(f)]] of repeating steps (c), (d), (e), (f), and (g) and (e) until every cell belonging to a common signal domain has been inserted in a corresponding list of cells for the common signal domain.
- 12 (currently amended): The computer program product of Claim 11 <u>further causing the computer to perform comprising</u> a step [[(g)]] of generating as output a corresponding list of cells for a common signal domain in the integrated circuit design.
- 13 (original): The computer program product of Claim 10 wherein step (d) includes storing a name of the selected cell in the corresponding list of cells for the common signal domain associated with the signal driver.
- 14 (currently amended): The computer program product of Claim 10 <u>further causing the computer to perform comprising performing</u> steps (b), (c), (d), (e), (f), and (g) and (e) for cells that are flip-flops in a scan chain.
- 15 (currently amended): The computer program product of Claim 14 <u>further causing the computer to perform</u>

DOCKET NO. 03-0128 FETF: 81615/6653

comprising performing steps (b), (c), (d), (e), (f), and (g) and (e) for a common signal domain that is a scan clock domain.

- 16 (currently amended): The computer program product of Claim 15 <u>further causing the computer to perform comprising performing</u> steps (d), (e), (f), and (g) and (e) for a net that is a clock net.
- 17 (currently amended): The computer program product of Claim 16 <u>further causing the computer to perform comprising performing</u> steps (d), (e), (f), and (q) and (e) for an input port that is a clock port.
- 18 (currently amended): The computer program product of Claim 17 <u>further causing the computer to perform comprising performing</u> steps (d), (e), (f), and (g) and (e) for a signal driver that is a clock driver.
